

ENF1180 Programming Languages - Fall2026

Course Information

Instructor: Dr. Fettah Kiran (fkiran@yildiz.edu.tr) F-B29

Class Hours: Wednesday 13:30-16:20

Class Location: A-151

Office Hours: Wednesday 10:00 - 12:00, Thursday 14:00 - 16:00 by [Appointment](#)

Course Materials: [GitHub](#), [Online Yildiz](#)

Textbook and course materials

- Main Textbook: C How to Program, 6/e Harvey M. Deitel and Paul J. Deitel, Pearson Inc. 2010
- Other useful links:
 - www.cplusplus.com
 - <https://en.cppreference.com/>
- Command line reference: <https://ss64.com>

Grading

Exam: 70% (30% Mid-term, 40% Final)

Assignments: 30%

Course Objectives

- The objective of this course is to provide the skills necessary for the effective computation and computer programming in engineering applications.
- Students will develop their programming skills through a variety of assignments and by reviewing case studies and example programs.
- The learning outcome is proficiency in writing small to medium sized programs in a procedural programming language.

Programming environment

The efforts in this course will involve quite good use of Linux and GNU Compiler Collection (GCC). The basic materials to make the students familiar with GCC will be provided. You may use any platform to develop your program; your final code can be compiled and executed on Linux, as this will be the testing platform used by the instructor.

1. For Windows,

- a. Minimalist GNU for Windows (MinGW) is a development environment for Microsoft applications. MinGW includes a port of the GCC, including C, C++, ADA and FORTRAN compilers. (Download link: [MinGW](#))
- b. [Code::Blocks](#) is highly recommended.
- c. Integrated Development Environments (IDE's) which have complex built-in tools for editing compiling, running, and debugging programs, ([VSCode](#), [Dev-C++](#) etc.) are available to use.

2. For Mac OS, make sure you install Xcode and your machine is UpToDate.**3. If you say I want to use Linux,**

To compile your C codes, gcc (C compiler of GCC set) on Linux Ubuntu is a very clear way. Additions were made to simplify and clarify the creation of a C/C++ program on Ubuntu Linux.

Academic Honesty

Any misconduct in this course is considered a serious offense, and strong penalties will be the results of such behaviors. It is cheating to copy others' code. Fake program outputs and documents is also considered as cheating.

Course Plan

Week	Subjects	Preparation
1	Introduction to the course	Lecture Notes
2	Basic programming skills with C	Lecture Notes
3	Data types, operators	Lecture Notes
4	Control Statements	Lecture Notes
5	C program control	Lecture Notes
6	Functions in C I	Lecture Notes
7	Functions in C II	Lecture Notes
8	Mid-term	
9	Arrays	Lecture Notes
10	Pointers	Lecture Notes
11	Characters and Strings	Lecture Notes
12	Structures, File Processing	Lecture Notes
13	Formatted I/O	Lecture Notes
14	Final Exam
